Company/Organization: Monadnock Paper Mills

#### Challenge or Opportunity:

In 2006 a local business lost all of their farmland to flooding. The cost of replacing the soil was out of their reach.

#### Approach or Solution:

A byproduct of Monadnock's production and water treatment facility is short paper fiber or SPF. This nutrient rich, safe material is ideal for compost, soil amendments and animal bedding. Monadnock collaborated with Resource Management, Inc. (RMI), Department of Agriculture, NHDES and the Governor office to help the family rebuild their farm.

#### Impact:

Today, the sheep are grazing again the grounds a lush with green vegetation.
