Company/Organization: WorkWaste a subsidiary of Loureiro Engineering Associates, Inc.

Challenge or Opportunity:

Managing post process waste in a sustainable manner can be challenging. Too often companies are unable to find a cost effective, environmentally friendly way of disposing waste without the use of landfills. That is where WorkWaste comes in. WorkWaste does the work for their clients, every step of the way and provides sustainability through service. By diverting waste from landfills and offering recycling programs, WorkWaste helps businesses manage waste metrics and total cost value to achieve positive results.

Approach or Solution:

A large manufacturer in Manchester, N.H. was in need of finding a better way of managing waste and found a new approach with WorkWaste. The WorkWaste team was quick to respond and assessed the manufacturer's facility to identify a feasible management strategy for post process waste. By taking advantage of WorkWaste's Zero Landfill and Recycling Services the manufacturer was able to reduce their waste costs by 23.5% with little effort. It was simple, WorkWaste took care of everything. They provided containers and delivered the waste to facilities where it was converted into power or recycled.

Impact:

Not only did this Manchester manufacturer save money, they reduced their landfill legacy by over 600 cubic yards in just six months — a 90% volume reduction! Now that's something worth celebrating! In addition, the waste was then used to generate over 75,000 kWhs at a waste-to-energy facility for neighboring communities. This is a sustainability success story for the manufacturer, the environment and New Hampshire!
